PROMPT ENGINEERING FRAMEWORK

HOW TO SPEAK TO AI SO IT ENGINEERS EXTRAORDINARY RESULTS

01

WHO AM I

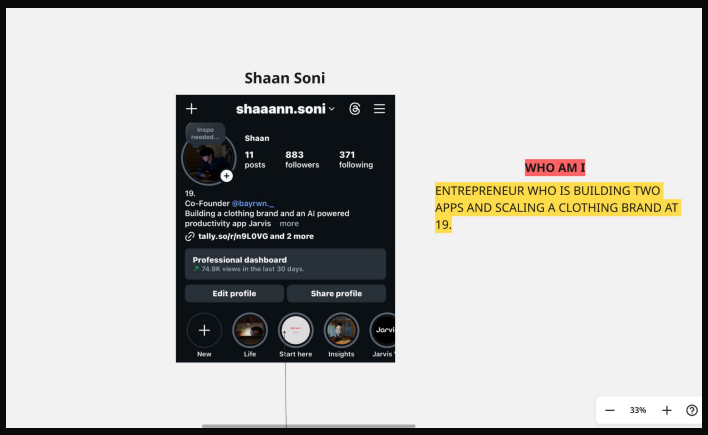
The Person Behind This Framework

ENTREPRENEUR BUILDING TWO APPS

AND SCALING A CLOTHING BRAND AT 19.

I'm Shaan — 19 years old, building an AI productivity app, a clothing brand, and a personal brand simultaneously. Over the past two years I've architected AI agents, engineered automation workflows, built apps without writing a single line of code, and decoded short-form content that commands attention.

Every single system I operate on was built through obsessive experimentation — not theory. What you're reading is distilled from real problems, real builds, and real results.



@shaaann.soni — building in public.

02

THE REALISATION

Why Most People Fail at Getting Results from AI

> **You're not getting the results you want from AI because you don't know how to speak to it.**

Most people open an AI tool, type a vague sentence, get a mediocre output, and conclude that AI isn't that useful. That's not an AI problem — that's a communication problem. AI is extraordinarily capable, but it operates at the precise level of clarity you give it.

Think of it like this: if you hired the world's best architect and gave them the brief *"build me something nice"* — you'd get something generic. Give them exact dimensions, references, materials, and a vision — you get something extraordinary. AI is no different.

THE THREE REASONS YOUR PROMPTS FAIL

- **No identity set** — You haven't told AI who it should be or how it should think. It defaults to generic.
- **No specificity** — Your problem description is too broad. AI can't solve what it doesn't fully understand.
- **No reference** — You haven't shown AI what a good output looks like. It's guessing your standard.

Without wasting any more of your time — here is the no-BS framework for writing prompts that engineer results that actually move the needle.

03

WHAT IS PROMPT ENGINEERING

Defined Simply. Applied Powerfully.

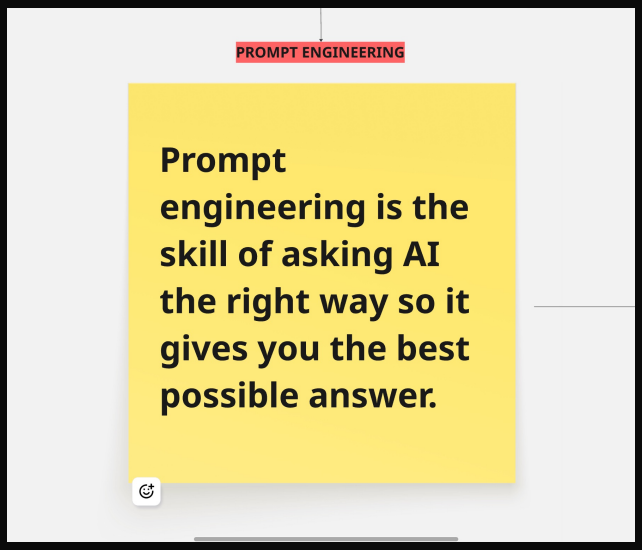
Prompt engineering is the skill of asking AI the right way so it gives you the best possible outcome.

It's not a technical skill in the traditional sense. You don't need to understand how AI models work under the hood. What you need is the ability to communicate with precision — to articulate your problem, your desired outcome, and your standard with enough clarity that AI can operate at its full capacity.

In this era, prompt engineering is the most accessible high-leverage skill available. It requires no prior technical knowledge — only the discipline to think clearly before you type.

WHY THIS SKILL COMPOUNDS FASTER THAN ANY OTHER

- Every tool you use — ChatGPT, Claude, Midjourney, Cursor — runs on prompts. One skill, infinite applications.
- The better your prompts, the faster you build. You compress weeks of work into hours.
- It makes every other skill you have more powerful — writing, coding, marketing, design.
- It's the difference between using AI as a calculator and using it as a full-stack co-founder.



Prompt engineering — defined.

04

HOW TO WRITE GOOD PROMPTS

The 4-Part Framework

A good prompt is written with extreme clarity on the problem you have and what you want the solution to look like. Every element below is non-negotiable if you want outputs that are genuinely useful.

1 SET AN IDENTITY FOR THE AI

Before anything else, define who the AI should be. Tell it how to think, how to behave, and what level of expertise it should operate at. AI defaults to generic when given no identity — so assign it one that's specific to your use case.

Example: "You are a world-class scriptwriter who has generated millions of views for founders through high-vocabulary storytelling."

2 DESCRIBE YOUR PROBLEM IN EXHAUSTIVE DETAIL

Leave nothing out. The more context you provide, the more precisely AI can solve your problem. Include your current situation, what you've already tried, constraints you're working within, and any nuance that would help someone understand your problem from scratch.

If you find yourself thinking "this detail probably doesn't matter" — include it anyway.

3 DEFINE EXACTLY WHAT YOU WANT AS THE SOLUTION

Don't leave the output open-ended. Specify the format, the length, the tone, the structure, and every detail of what a perfect solution looks like to you. AI will match whatever standard you set — so set a high one with precision.

Example: "30-35 seconds when spoken aloud, authoritative tone, no bullet points, flows like natural conversation with no robotic pauses between lines."

4 GIVE REFERENCES

AI understands everything — but it performs at its peak when it has something concrete to model. Attach examples of outputs you admire, reference scripts, visual examples, or describe a benchmark you want to match or surpass.

References eliminate the guesswork entirely. They're the single biggest unlock most people skip.

THE GOLDEN RULE

Clarity of input determines quality of output. Every vague word in your prompt is a degree of precision you're surrendering to AI's default judgment.

05

GOOD vs BAD PROMPT EXAMPLES

See the Difference in Real Terms

BAD PROMPT

Generate me a script for my Instagram reel on the topic: discipline is crucial for growth.

Why this fails: No identity assigned. No context on the creator, their audience, or their style. No output specification. No reference. AI will produce something completely generic that sounds like every other reel on the internet.

GOOD PROMPT

Your identity: You are that guy who has got founders millions of views and scaled from 0-100k followers through storytelling scripts — work accordingly to that level of a person.

Make my episode general idea into a script making it sound natural, concise, and effective for a short-form video/reel for 30-35 seconds. Don't exclude high vocabulary words in the script. The main objective is to remove repetitive parts and have a natural, authoritative flow and outstanding storytelling that gets 1M+ views and high-profile follows (40k+).

Take this as the reference script. It should have a flow like the reference script, high vocabulary words like the reference script, a one-on-one connection with the viewer, and should not have too much break between each line. Having too much break makes it sound robotic. Just like in natural conversation it has a one-take flow.

Reference script: [Attach your reference script]

Why this works: Identity assigned with precision. Output spec defined (30-35 seconds, vocabulary level, no robotic pauses). Standard set (1M+ views, 40k+ follows). Reference provided. AI has everything it needs to operate at its ceiling.

EXAMPLE OF A GOOD AND A BAD PROMPT:

1. Bad prompt:

Generate me a script for my instagram reel on the topic: discipline is crucial for growth.

2. Good prompt:

Your identity: You are that guy who has got founders millions of views and scaled from 0-100k followers through storytelling scripts so work accordingly to that level of a person. Make my episode general idea into a script making it sound natural , concise , and effective for a short form video/reel for 30-35 seconds.

Don't exclude high vocabulary words in the script. main objective is to remove parts which sound repetiive and have a natural authorative flow and outstanding storytelling flow which get 1M+ views and high profile follows (40k+). Use the reference script as an example.

Take this as the reference script. it should have a flow like the reference script , high vocabulary words like the reference script, should have a one on one connection with the viewer and should not have too much break with each line. Having too much break makes it sound robotic. Just like in natural conversation it has a one take flow when you are talking about something.

Reference script: [Attach your reference script]

FRAMEWORK

FULL SUMMARY

The Complete Blueprint at a Glance

STEP	ELEMENT	WHAT TO DO
01	SET AN IDENTITY	Tell AI who it is, how to think, and what expertise level to operate at
02	DESCRIBE THE PROBLEM	Include every detail — context, constraints, nuance, current situation
03	DEFINE THE SOLUTION	Specify format, length, tone, structure — leave nothing open-ended
04	GIVE REFERENCES	Attach examples, benchmarks, or descriptions of what great looks like

CLARITY OF INPUT DETERMINES QUALITY OF OUTPUT.
